June 2005
Advanced Level Examination

MATHEMATICS
Unit Pure Core 4

MPC4

Friday 24 June 2005 Morning Session

In addition to this paper you will require:

- an 8-page answer book;
 - the **blue** AQA booklet of formulae and statistical tables.
- You may use a graphics calculator.

Time allowed: 1 hour 30 minutes

Instructions

- Use blue or black ink or ball-point pen. Pencil should only be used for drawing.
- Write the information required on the front of your answer book. The *Examining Body* for this paper is AQA. The *Paper Reference* is MPC4.
- Answer **all** questions.
- All necessary working should be shown; otherwise marks for method may be lost.

Information

- The maximum mark for this paper is 75.
- Mark allocations are shown in brackets.

Advice

- Unless stated otherwise, formulae may be quoted, without proof, from the booklet.

Answer **all** questions.

- 1 (a) Express $2 \sin x + \cos x$ in the form $R \sin(x + \alpha)$ where R is a positive constant and α is an acute angle. Give your value of α to the nearest 0.1° . (3 marks)
- (b) Solve the equation $2 \sin x + \cos x = 1$ for $0^\circ \leq x < 360^\circ$. (4 marks)
- 2 (a) Express $\frac{3x - 5}{(x + 3)(2x - 1)}$ in the form $\frac{A}{x + 3} + \frac{B}{2x - 1}$. (3 marks)
- (b) Hence find $\int \frac{3x - 5}{(x + 3)(2x - 1)} dx$. (3 marks)
- 3 (a) Find the remainder when $2x^3 - x^2 + 2x - 2$ is divided by $2x - 1$. (2 marks)
- (b) Given that $\frac{2x^3 - x^2 + 2x - 2}{2x - 1} = x^2 + a + \frac{b}{2x - 1}$, find the values of a and b . (4 marks)
- 4 (a) Find the binomial expansion of $(1 + x)^{-\frac{1}{2}}$ up to the term in x^2 . (2 marks)
- (b) Hence, or otherwise, obtain the binomial expansion of $\frac{1}{\sqrt{1 + 2x}}$ up to the term in x^2 , in simplified form. (3 marks)
- (c) Use your answer to part (b) with $x = -0.1$ to show that $\sqrt{5} \approx 2.23$. (3 marks)
- 5 A curve is defined by the parametric equations
- $$x = 2t + \frac{1}{t}, \quad y = \frac{1}{t}, \quad t \neq 0$$
- (a) Find the coordinates of the point on the curve where $t = \frac{1}{2}$. (2 marks)
- (b) Show that the cartesian equation of the curve can be written as
- $$xy - y^2 = 2 \quad (2 \text{ marks})$$
- (c) Show that the gradient of the curve at the point $(3, 2)$ is 2. (6 marks)

6 (a) Express $\sin 2x$ in terms of $\sin x$ and $\cos x$. (1 mark)

(b) Using the identity $\cos(A + B) = \cos A \cos B - \sin A \sin B$:

(i) express $\cos 2x$ in terms of $\sin x$ and $\cos x$; (2 marks)

(ii) show, by writing $3x$ as $(2x + x)$, that

$$\cos 3x = 4 \cos^3 x - 3 \cos x \quad (4 \text{ marks})$$

(c) Show that $\int_0^{\frac{\pi}{2}} \cos^3 x \, dx = \frac{2}{3}$. (5 marks)

7 The points A and B have coordinates $(1, 4, 2)$ and $(2, -1, 3)$ respectively.

The line l has equation $\mathbf{r} = \begin{bmatrix} 2 \\ -1 \\ 3 \end{bmatrix} + \lambda \begin{bmatrix} 1 \\ -1 \\ 1 \end{bmatrix}$.

(a) Show that the distance between the points A and B is $3\sqrt{3}$. (2 marks)

(b) The line AB makes an acute angle θ with l . Show that $\cos \theta = \frac{7}{9}$. (3 marks)

(c) The point P on the line l is where $\lambda = p$.

(i) Show that

$$\overrightarrow{AP} \cdot \begin{bmatrix} 1 \\ -1 \\ 1 \end{bmatrix} = 7 + 3p \quad (4 \text{ marks})$$

(ii) Hence find the coordinates of the foot of the perpendicular from the point A to the line l . (3 marks)

TURN OVER FOR THE NEXT QUESTION

Turn over ►

- 8 (a) A cup of coffee is cooling down in a room. At time t minutes after the coffee is made, its temperature is x °C, where

$$x = 15 + 70e^{-\frac{t}{40}}$$

- (i) Find the temperature of the coffee when it is made. (1 mark)
- (ii) Find the temperature of the coffee 30 minutes after it is made. (2 marks)
- (iii) Find how long it will take for the coffee to cool down to 60 °C. (3 marks)
- (b) (i) Use integration to solve the differential equation

$$\frac{dx}{dt} = -\frac{1}{40}(x - 15), \quad x > 15$$

given that $x = 85$ when $t = 0$, expressing t in terms of x . (6 marks)

- (ii) Hence show that $x = 15 + 70e^{-\frac{t}{40}}$. (2 marks)

END OF QUESTIONS
