## Pearson Edexcel Level 3 GCE

Time 1 hour 30 minutes

Paper  
reference

**9FM0/4C**

## Further Mathematics

**Advanced**

### **PAPER 4C: Further Mechanics 2**

#### You must have:

Mathematical Formulae and Statistical Tables (Green), calculator

Total Marks

**Candidates may use any calculator permitted by Pearson regulations.  
Calculators must not have the facility for symbolic algebra manipulation,  
differentiation and integration, or have retrievable mathematical formulae  
stored in them.**

#### Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
  - *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Unless otherwise indicated, whenever a value of  $g$  is required, take  $g = 9.8 \text{ m s}^{-2}$  and give your answer to either 2 significant figures or 3 significant figures.

#### Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 8 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
  - *use this as a guide as to how much time to spend on each question.*

#### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

1. Three particles of masses  $2m$ ,  $3m$  and  $km$  are placed at the points with coordinates  $(3a, 2a)$ ,  $(a, -4a)$  and  $(-3a, 4a)$  respectively.

The centre of mass of the three particles lies at the point with coordinates  $(\bar{x}, \bar{y})$ .

(a) (i) Find  $\bar{x}$  in terms of  $a$  and  $k$

(ii) Find  $\bar{y}$  in terms of  $a$  and  $k$

(4)

Given that the distance of the centre of mass of the three particles from the point  $(0, 0)$

is  $\frac{1}{3}a$

(b) find the possible values of  $k$

(2)

2. A cyclist and her cycle have a combined mass of 60 kg. The cyclist is moving along a straight horizontal road and is working at a constant rate of 200 W.

When she has travelled a distance  $x$  metres, her speed is  $v \text{ m s}^{-1}$  and the magnitude of the resistance to motion is  $3v^2 \text{ N}$ .

(a) Show that  $\frac{dv}{dx} = \frac{200 - 3v^3}{60v^2}$  (4)

The distance travelled by the cyclist as her speed increases from  $2 \text{ m s}^{-1}$  to  $4 \text{ m s}^{-1}$  is  $D$  metres.

(b) Find the exact value of  $D$  (3)

3.

**Figure 1**

Nine uniform rods are joined together to form the rigid framework  $ABCDEF$ , with  $AB = BC = DF = 3a$ ,  $BF = CD = DE = 4a$  and  $AF = FE = CF = 5a$ , as shown in Figure 1. All nine rods lie in the same plane.

The mass per unit length of each of the rods  $BF$ ,  $CF$  and  $DF$  is twice the mass per unit length of each of the other six rods.

- (a) Find the distance of the centre of mass of the framework from  $AC$

(4)

The mass of the framework is  $M$ . A particle of mass  $kM$  is attached to the framework at  $E$  to form a loaded framework.

When the loaded framework is freely suspended from  $F$ , it hangs in equilibrium with  $CE$  horizontal.

- (b) Find the exact value of  $k$

4.

**Figure 2**

A small smooth ring  $R$  of mass  $m$  is threaded onto a light inextensible string. One end of the string is attached to a fixed point  $A$  and the other end of the string is attached to the fixed point  $B$  such that  $B$  is vertically above  $A$  and  $AB = 6a$

The ring moves with constant angular speed  $\omega$  in a horizontal circle with centre  $A$ . The string is taut and  $BR$  makes a constant angle  $\theta$  with the downward vertical, as shown in Figure 2.

The ring is modelled as a particle.

Given that  $\tan \theta = \frac{8}{15}$

- (a) find, in terms of  $m$  and  $g$ , the magnitude of the tension in the string,

(3)

- (b) find  $\omega$  in terms of  $a$  and  $g$

6.

Figure 4

The shaded region shown in Figure 4 is bounded by the  $x$ -axis, the line with equation  $x = 9$  and the line with equation  $y = \frac{1}{3}x$ . This shaded region is rotated through  $360^\circ$  about the  $x$ -axis to form a solid of revolution. This solid of revolution is used to model a solid right circular cone of height 9 cm and base radius 3 cm.

The cone is non-uniform and the mass per unit volume of the cone at the point  $(x, y, z)$  is  $\lambda x \text{ kg cm}^{-3}$ , where  $0 \leq x \leq 9$  and  $\lambda$  is constant.

- (a) Find the distance of the centre of mass of the cone from its vertex.

(6)

A toy is made by joining the circular plane face of the cone to the circular plane face of a uniform solid hemisphere of radius 3 cm, so that the centres of the two plane surfaces coincide.

The weight of the cone is  $W$  newtons and the weight of the hemisphere is  $kW$  newtons.

When the toy is placed on a smooth horizontal plane with any point of the curved surface of the hemisphere in contact with the plane, the toy will remain at rest.

- (b) Find the value of  $k$

7.

**Figure 5**

A package  $P$  of mass  $m$  is attached to one end of a string of length  $\frac{2a}{5}$ . The other end of the string is attached to a fixed point  $O$ . The package hangs at rest vertically below  $O$  with the string taut and is then projected horizontally with speed  $u$ , as shown in Figure 5.

When  $OP$  has turned through an angle  $\theta$  and the string is still taut, the tension in the string is  $T$

The package is modelled as a particle and the string as being light and inextensible.

$$(a) \text{ Show that } T = 3mg \cos \theta - 2mg + \frac{5mu^2}{2a} \quad (6)$$

Given that  $P$  moves in a complete vertical circle with centre  $O$

$$(b) \text{ find, in terms of } a \text{ and } g, \text{ the minimum possible value of } u \quad (2)$$

$$\text{Given that } u = 2\sqrt{ag}$$

$$(c) \text{ find, in terms of } g, \text{ the magnitude of the acceleration of } P \text{ at the instant when } OP \text{ is horizontal.} \quad (3)$$

$$(d) \text{ Apart from including air resistance, suggest one way in which the model could be refined to make it more realistic.} \quad (1)$$

8.

Throughout this question, use  $g = 10 \text{ m s}^{-2}$

A light elastic string has natural length 1.25 m and modulus of elasticity 25 N.

A particle  $P$  of mass 0.5 kg is attached to one end of the string. The other end of the string is attached to a fixed point  $A$ . Particle  $P$  hangs freely in equilibrium with  $P$  vertically below  $A$ .

The particle is then pulled vertically down to a point  $B$  and released from rest.

- (a) Show that, while the string is taut,  $P$  moves with simple harmonic motion with period  $\frac{\pi}{\sqrt{10}}$  seconds. (6)

The maximum kinetic energy of  $P$  during the subsequent motion is 2.5 J.

- (b) Show that  $AB = 2 \text{ m}$  (3)

The particle returns to  $B$  for the first time  $T$  seconds after it was released from rest at  $B$

- (c) Find the value of  $T$  (5)
