Pearson Edexcel GCE in Core Mathematics 1R (6663\_01R)

#### Edexcel and BTEC Qualifications

www.mymathscloud.com Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

#### Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. - All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

#### **General Instructions for Marking**

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- M marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- **\*** The answer is printed on the paper or ag- answer given
- or d... The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

- WWW. MYRAHISCIOUS.com 5. For misreading which does not alter the character of a question or materially six it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

#### General Principles for Core Mathematics Marking

www.mymathscloud.com (But note that specific mark schemes may sometimes override these general principles).

#### Method mark for solving 3 term guadratic:

#### 1. Factorisation

 $(x^{2} + bx + c) = (x + p)(x + q)$ , where |pq| = |c|, leading to x = ...

 $(ax^2 + bx + c) = (mx + p)(nx + q)$ , where |pq| = |c| and |mn| = |a|, leading to x = ...

#### 2. Formula

Attempt to use the correct formula (with values for a, b and c).

#### 3. Completing the square

Solving  $x^2 + bx + c = 0$ :  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to  $x = \dots$ 

#### Method marks for differentiation and integration:

#### 1. Differentiation

Power of at least one term decreased by 1.  $(x^n \rightarrow x^{n-1})$ 

#### 2. Integration

Power of at least one term increased by 1.  $(x^n \rightarrow x^{n+1})$ 

#### Use of a formula

www.mymathscloud.com Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

Method mark for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is not quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

#### Exact answers

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

#### Method 1

M1 For multiplying both sides by 
$$\sqrt{2}$$
 – allow a slip e.g.  $\sqrt{2}x\sqrt{8} + 10 = \frac{6x}{\sqrt{2}} \times \sqrt{2}$  or  
 $\sqrt{2} \times 10 + x\sqrt{8} = \frac{6x}{\sqrt{2}} \times \sqrt{2}$ , where one term has an error or the correct  $\sqrt{2}(10 + x\sqrt{8}) = \frac{6x}{\sqrt{2}} \times \sqrt{2}$   
NB  $x\sqrt{8} + 10 = 6x\sqrt{2}$  is M0

A1 A correct equation in x with no fractional terms. Eg  $x\sqrt{16} + 10\sqrt{2} = 6x$  oe.

M1 An attempt to solve their linear equation in x to produce an answer of the form  $a\sqrt{2}$  or  $a\sqrt{50}$ 

A1  $5\sqrt{2}$  oe (accept  $1\sqrt{50}$ )

#### Method 2

A1

M1 For writing  $\sqrt{8}$  as  $2\sqrt{2}$  or  $\frac{6}{\sqrt{2}}$  as  $3\sqrt{2}$ 

A1 A correct equation in x with no fractional terms. Eg  $2\sqrt{2}x + 10 = 3\sqrt{2}x$  or  $x\sqrt{8} + 10 = 3\sqrt{2}x$  oe.

M1 An attempt to solve their linear equation in x to produce an answer of the form  $a\sqrt{2}$  or  $a\sqrt{50}$ 

$$\sqrt{2}x = 10 \Rightarrow x = \frac{10}{\sqrt{2}} = \frac{10\sqrt{2}}{2}, = 5\sqrt{2}$$
  
or  $\sqrt{2}x = 10 \Rightarrow 2x^2 = 100 \Rightarrow x^2 = 50 \Rightarrow x = \sqrt{50}$  or  $5\sqrt{2}$   
 $5\sqrt{2}$  oe Accept  $1\sqrt{50}$

A1\* cao x > 1.7. This is a given answer, there must not be any errors, but accept 1.7 < x

- (b) Marks parts (b) and (c) together
  - B1 Writes a correct statement in x for the area. It need not be simplified. You may isw Amongst numerous possibilities are.

 $2x(2x+1)+2x(6x+3), 16x^2+8x, 4x(6x+3)-2x(4x+2), 4x(2x+1)+2x(4x+2)$ 

- M1 Sets their quadratic expression < 120 and collects on one side of the inequality
- M1 For an attempt to solve a 3 Term quadratic equation producing two solutions by factorising, formula or completion of the square with the usual rules (see notes)
- M1 For choosing the 'inside' region. Can follow through from their critical values must be stated not just a table or a graph. Can also be implied by 0 < x < upper value

A1 
$$-3 < x < \frac{5}{2}$$

(a) M1 Uses the gradient formula with points *L* and *M* i.e. quote  $gradient = \frac{y_1 - y_2}{x_1 - x_2}$  and attempt to substitute

correct numbers. Formula may be implied by the correct  $\frac{2-(-4)}{-1-7}$  or equivalent.

A1 Any correct single fraction gradient i.e 
$$\frac{6}{-8}$$
 or equivalent

M1 Uses their gradient with either (-1, 2) or (7, -4) to form a linear equation

Eg 
$$y-2 = their' - \frac{3}{4}'(x+1)$$
 or  $y+4 = their' - \frac{3}{4}'(x-7)$  or  $y = their' - \frac{3}{4}'x + c$  then find a value

for c by substituting (-1,2) or (7, -4) in the correct way( not interchanging x and y)

A1 Accept  $\pm k(4y+3x-5) = 0$  with k an integer (This implies previous M1)

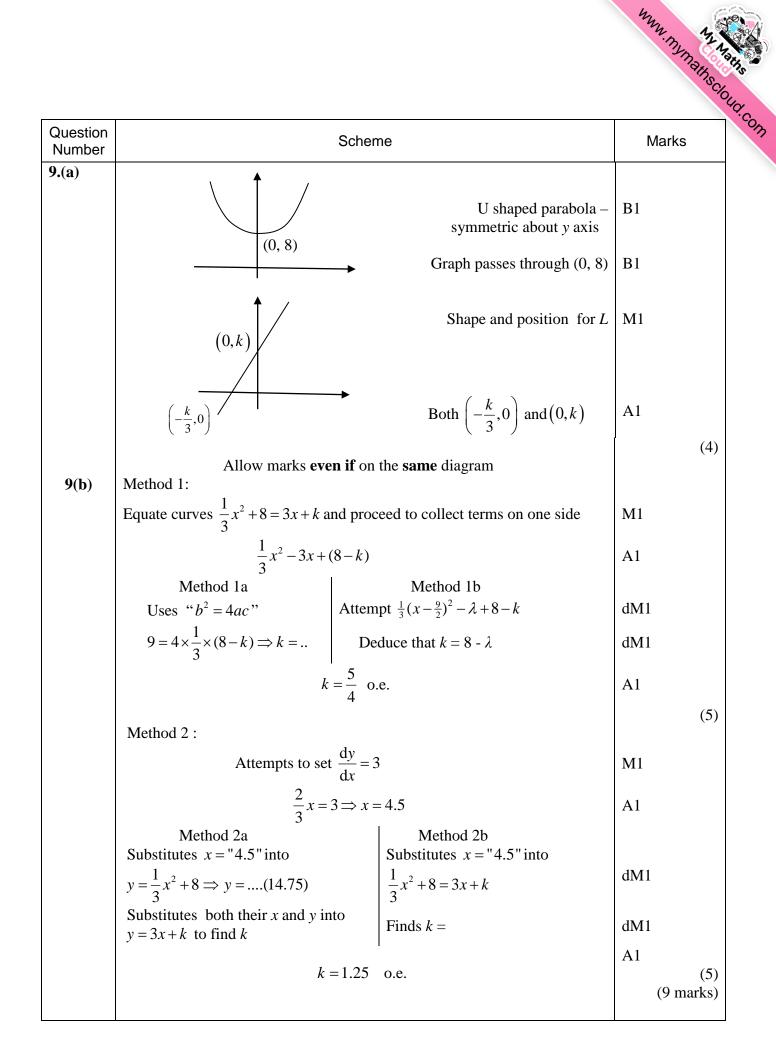

(b) M1 Attempts to use gradient 
$$LM \times gradient MN = -1$$
. ie.  $-\frac{3}{4} \times \frac{p+4}{16-7} = -1$  (allow sign errors)

- Or Attempts Pythagoras correct way round (allow sign errors)
- M1 An attempt to solve their linear equation in 'p'. A1 cao p = 8

(c) M1 For using their numerical value of p and adding 6. This may be done by any complete method (vectors, drawing, perpendicular straight line equations through L and N) or by no method. Assuming x = 7 is M0

A1 Accept 14 for both marks as long as no incorrect working seen (Ignore left hand side – allow k). If there is wrong working resulting fortuitously in 14 give M0A0. Allow (8, 14) as the answer.
