(a) Explain, in the context of the problem, what $\frac{dx}{dt}$ and M represent.

Given that initially the mass of waste products is zero,

(b) solve the differential equation, expressing x in terms of k, M and t.

Given also that
$$x = \frac{1}{2}M$$
 when $t = \ln 4$,

(c) find the value of x when $t = \ln 9$, expressing x in terms of M, in its simplest form.
